

Extend and connect care beyond the traditional walls of healthcare.

Secure, cloud-based, connected patient engagement.

Trapollo Converge is a highly flexible and extensible virtual care platform. Its powerful digital engagement tools, telehealth capabilities and monitoring functions connect our clients across the healthcare spectrum and their patient populations to fulfill the true promise of Connected Health delivery.

Our unique approach in using intelligent technology can provide you with:

Seamless integration — We help simplify planning and deploying remote care management with intuitive and easy-to-use technology and a device-agnostic platform for clinicians, patients and family caregivers.

360-degree engagement — Coordinate care for all monitored patients from a simple, single dashboard, which can be customized by disease state and patient population — allowing clinical teams to deliver holistic care.

Actionable data — Clinicians gain insights to enable early detection and proactive interventions, allowing health systems to start delivering value-based care.

Trapollo Converge also helps patients maintain their independence and better self-manage chronic conditions. All with the peace of mind that they can reach their care team with the push of a button.

From establishing patient goals through tasks and surveys to facilitating non-emergency communications between care team members, patients and their families to ensure medication compliance, Trapollo Converge offers true patient engagement.

Trapollo is proof that a patient-first approach to Connected Health makes it more human. More kind. Let us show you how.
